## The Rules For Determining Oxidation States

### These rules are always true:

1. For ions composed of only one atom, the oxidation state is equal to the charge of the ion.
2. For all elements and homonuclear molecules, the oxidation state of each atom is 0.
3. For molecules and polyatomic ions, the sum of the oxidation states must equal the total charge.
4. The oxidation state of fluorine in any compound is 1-.
5. In covalent compounds and polyatomic ions, H has an oxidation state of 1+.

### These rules are usually true:

6. In most compounds, oxygen has an oxidation state of 2-.
7. Group 7A elements (especially chlorine) usually have an oxidation state of 1-.
